HEALTHCARE

DELIVERY METHOD:
BID AND SPEC

PRINTABLE VERSION

The Ottawa General Hospital's Regional Cancer Centre provides short-term day cancer treatment services, including cancer prevention, cancer assessment, treatment (radiation and chemotherapy), support, follow-up and end-of-life care.

The construction included space for chemotherapy beds and a number of specialized MRI rooms. We provided all mechanical services, including heating, cooling, plumbing, medical gas piping, building controls, and fabrication.

Part of the construction occurred in an existing cancer treatment area, requiring exceptional project management to ensure continuous patient care and infection control.

The project was completed on time and on budget.
